

Virtual Stream

Packaging the most difficult applications

Published: April 2010

An oil & gas service company based in Aberdeen needed a trusted partner to package their most difficult applications. After a day 10 test, Virtual Stream were awarded the contract to package

Situation

Virtual Stream was referred by another IT provider to the client as a leader in application delivery.

Although the client has outsourced their IT to a global provider, Virtual Stream are often asked to support the more complex areas of IT infrastructure. In this case, the client had an outstanding list of applications to be packaged. We were asked to trial our skills for 10 days and through that time we quickly understood the technical level of the requirements of the work.

After those 10 days, we were awarded the contract to package some the industry's most complex applications.

Solution

Using up to the minute tools, we are now part of the Microsoft System Centre Configuration Manager team, packaging all applications. When other sites from around the world heard we were working through the list in the UK, the list became a global one.

Benefits

The client now has complete faith in the packaged applications, (which wasn't the case previously) each one having been documented, ready for testing. We are also on hand at any time ready to review any outstanding queries.

Solution Overview

Customer Profile

This oil and gas service company is one of the great successes in the industry. Headquartered in Aberdeen, UK, they provide services to oil and gas operators globally.

Business Situation

The company required a trusted partner to package their most complex packages for delivery via Microsoft Systems Centre Configuration Manager

Solution

Virtual Stream used some of the most up to date tools to ensure that the level of packaging was at its best. The client had demanding requirements and we met them head on.

Virtual Stream solves business problems using today's technology. If your business is expanding into new locations and you require staff to have access to email and resources or figuring out how to upgrade those old legacy servers with the minimum of downtime, that's what Virtual Stream do. Whether you are looking for IT Strategy or operational assistance, Virtual Stream can advise on any aspect.
